

# James Zhao

Junior Software Engineer | Technology

Portfolio | [LinkedIn](#) | [GitHub](#) | jameszhao1021@gmail.com | 0403248168

## PERSONAL SUMMARY

---

Passionate and detail-oriented software engineer with experience in full-stack development, testing, and code review. Skilled in troubleshooting, debugging, and optimising applications to enhance performance and user experience. Possesses a problem-solving mindset and a commitment to delivering high-quality applications while continuously learning new technologies in fast-paced environments.

## TECHNICAL SKILL

---

- **Front End:** React, JavaScript, TypeScript, jQuery, AJAX, HTML, CSS, Bootstrap
- **Back End:** Python, Django, C#, .NET, Node.js, Express.js, MERN Stack, RESTful API
- **Testing & Debugging:** Postman, Chrome DevTools, troubleshooting, performance optimisation
- **Database & Visualisation:** PostgreSQL, MongoDB, Qlik Sense, Qlik View
- **Platforms & Management:** AWS, Linux, Git version control, Jira, Trello, Confluence

## PROFESSIONAL EXPERIENCE

---

### Graduate Developer

Oct 2024 - Feb 2025

Boon Solutions

Perth, Australia

- Developed a demo app in Qlik Cloud by scrambling data extrated from an existing application, recreating tables from scratch and modifying the UI; generated reports using the Excel add-in to showcase key functionalities
- Migrated applications from QlikView to Qlik Sense; updated data models, modified the front-end UI, and cross-checked extracted data to ensure accuracy and consistency
- Modified and maintained the Excel mapping file to ensure accurate table and field names in QVD files extracted from Pronto; improved data integrity based on requirements from the client
- Acquired profound insights into the ETL process, troubleshooting, and problem-solving while collaborating with team members to ensure timely and high-quality project delivery

### Technical Consultant

Aug 2021 - Oct 2023

Shinyway Education

Beijing, China

- Collaborated with cross-functional teams to design and develop website features using React and Bootstrap, improving UI consistency, performance and brand image
- Analysed and visualise data on admission rates at various universities to create proper application strategies tailored to individual clients, thereby improving their chances of acceptance
- Automated workflows and managed task prioritisation using project management tools, ensuring efficient handling of multiple applications and visa processes
- Served over 350 clients, understanding their educational and career goals, and provided application advice based on the academic background, interests, and preferences of clients

### Support Engineer

Sept 2018 - Jun 2019

Master Structural Design Corporation

Beijing, China

- Provided technical support and troubleshooting for MIDAS structural design software, configuring VPNs and assisting with software installation, testing, and performance evaluation
- Diagnosed and resolved customer issues regarding software features and performance, generating data-driven reports to showcase advantages and improvements
- Participated in structural design and analysis, using AutoCAD and engineering software to assess the stability and durability of structures
- Improved documentation quality by formulating and reviewing floor plans and reinforcement designs, ensuring compliance with safety standards

## SOFTWARE DEVELOPMENT EXPERIENCE

---

### NetMall | Django REST Framework, PostgreSQL

Apr 2024 - May 2024

- Developed a robust multi-vendor e-commerce platform using Django REST Framework; leveraged React for front end development, Python for back end development and PostgreSQL as the database

- Enabled each user to act as both a buyer and a seller; users can list, edit and delete products and purchase items listed by other users; the filter bar allowed users to find specific items
- Utilised Redux to implement authentication features, including registration, login, email verification and resetting password; applied AWS S3 bucket to store images
- Acquired thorough familiarity with the development and deployment of projects based on Django REST Framework, as well as the manipulation of PostgreSQL

### **Travel WikkiMedia | MERN Stack**

Mar 2024 - Apr 2024

- Led a team of four members to complete a well-designed MERN stack project; fulfilled a series of features, including blog creating, picture sharing, commenting, and profile editing
- Independently completed crud features that enabled users to view, create, delete, and edit blogs and profiles; assisted teammates in fulfilling crud operations for comment and gallery
- Consumed Rest Countries and Mapbox APIs that provided users with up-to-date geographical information and exceptional user experiences
- Organised brainstorming meetings, collected innovative ideas, and assigned various tasks to team members based on group objectives and individual skills
- Worked collaboratively with teammates, regularly integrating the latest progress on GitHub, gaining valuable experience in teamwork and further developing communication skills

### **Plant Diary | Express.js**

Mar 2024 - Mar 2024

- Independently utilised Express and jQuery to develop a plant diary app featured by AJAX-based crud operations; allowed users to add, delete and edit a bunch of information, including recently bought plants, plant details and diaries
- Self-learned AJAX and designed inline editing functionality for each part of the app, which enabled users to edit the content based on previous content without redirecting to a new page
- Applied MongoDB to store data; used appropriate routes, controllers and models to communicate client side and the server; fulfilled Google and Facebook authentications for logging in to the app
- Designed background-changing features to allow users to customise their pages; leveraged Bootstrap to conduct responsive design and user interface optimisation

### **Roulette Game | React, Chart.js**

Feb 2024 - Mar 2024

- Created a roulette with React; leveraged virtual DOM manipulation to fulfil multiple world-world-based features, including placing chips, calculating gains and losses and rotating wheel
- Designed the betting area and roulette wheel according to American-style roulette; set odds correspondingly and allowed users to place chips on multiple positions
- Provided users with immediate and accurate data feedback including balance, current bet, gain and lose; designed bankrupt features and betting limits
- Gained a deep understanding of the application of various hooks and virtual DOM manipulations; enhanced debugging and problem-solving skill

## **EDUCATION**

### **Software Engineering Immersive**

Jan 2024 - Apr 2024

General Assembly

Perth, Australia

- Core Modules: Front End Development, Full Stack Development, Python and Django, React

### **Master of Professional Engineering (Civil Engineering)**

Jul 2016 - Jul 2018

The University of Western Australia

Perth, Australia

- Core Modules: Transportation Engineering, Numerical Methods and Modelling, Finite Element Methods, Project Management & Engineering Practice

### **Bachelor of Science**

Jul 2013 - Jun 2016

The University of Western Australia

Perth, Australia

- Core Modules: Computer Analysis & Visualisation, Energy, Structural Analysis
